

Ducks Unlimited Canada has a Forage Program to meet your needs

Forage crops not only provide sustainable grazing sources for livestock, they're part of sound land management, diversifying crop rotations, preventing erosion and retaining nutrients.

Forage Conversion Program

Thinking of converting your fields to forage this year? Ducks Unlimited Canada (DUC) has financial incentives that can help. **Get \$35/acre from Ducks Unlimited Canada when seeding eligible land to pasture or hay. Producers may also be eligible for a \$100/bag rebate from Nutrien Ag Solutions™ and DUC.**

Forage in Rotation Program

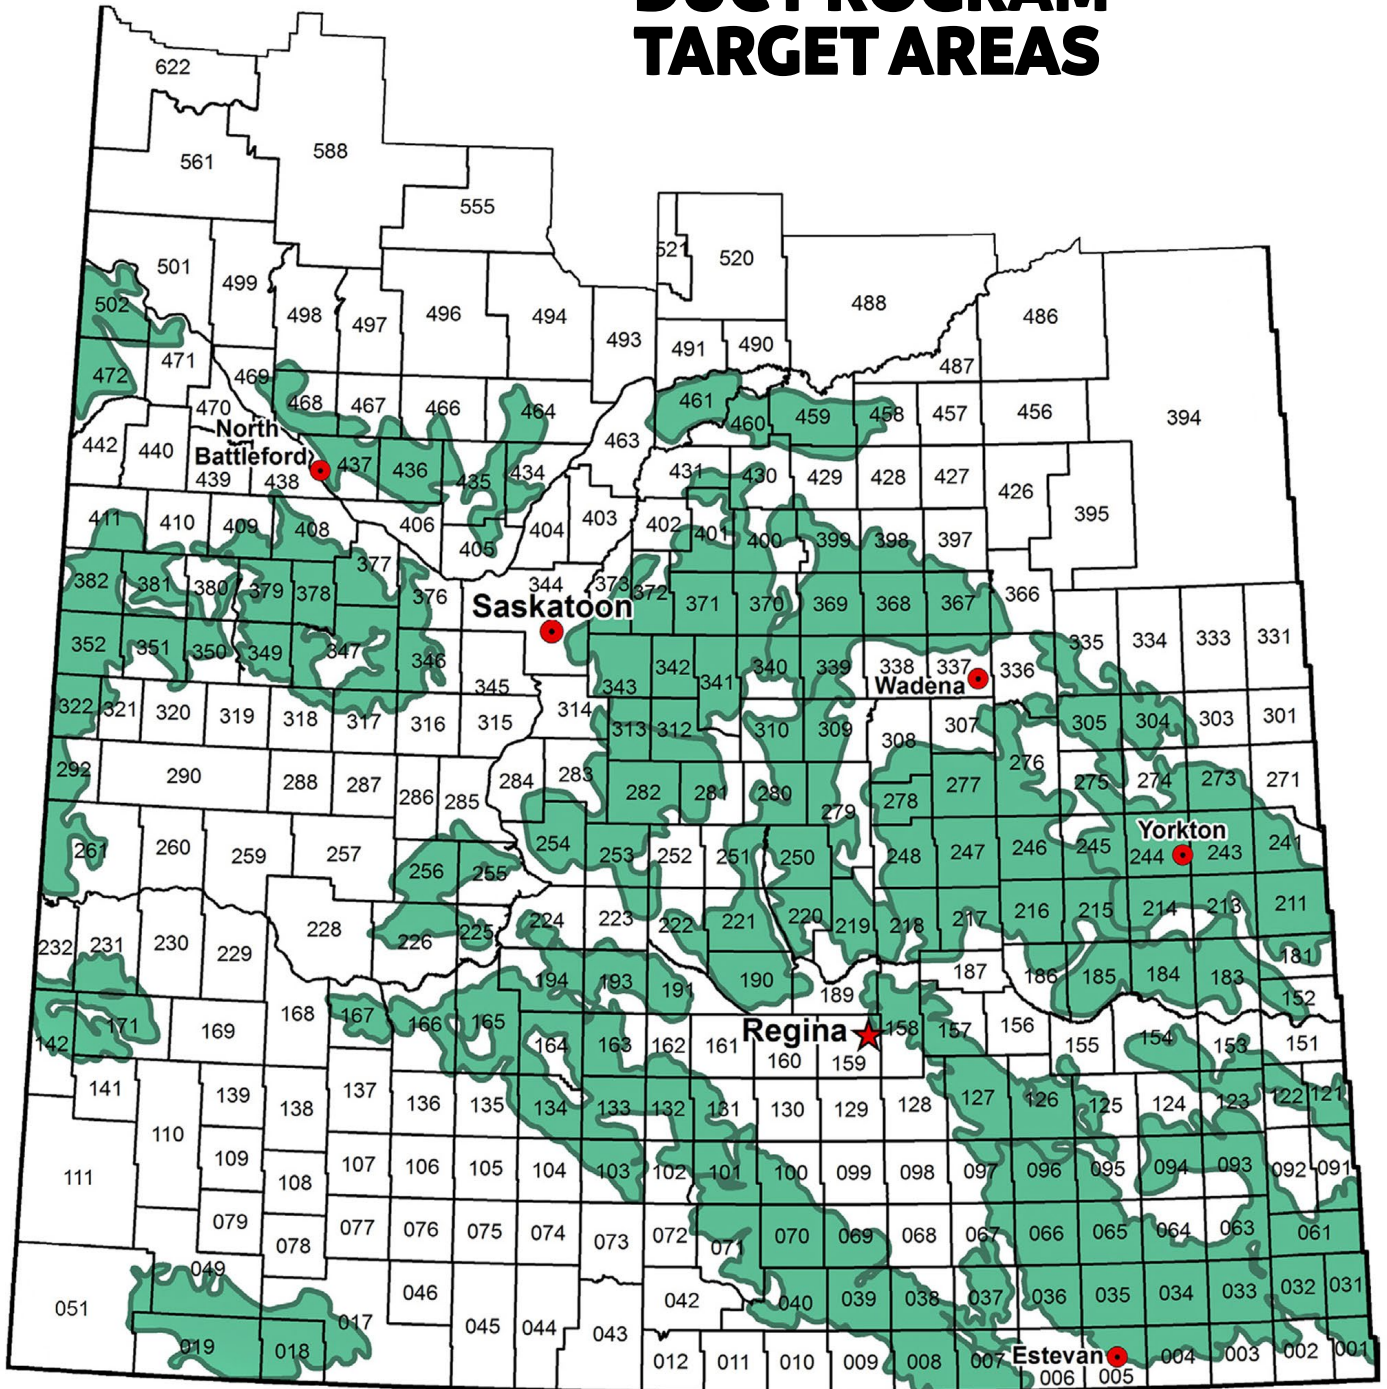

DUC agronomists will work with you to implement a rotational forage program and provide financial compensation for those areas that are seeded.

Marginal Areas Program

DUC agronomists will work with you to find areas on your land that are growing poor crops due to excessive moisture or salinity, and work with you to seed those areas to forage. DUC will also provide financial compensation of \$125/acre on those forage lands. The remaining cultivated acres remain farmed to maximize your crop yield and profit on the most viable cultivated acres of your field.

DUC PROGRAM TARGET AREAS
